

Appendix 7

Pregnancy

Here at VTSU, our goal is to provide you with the best educational experience possible. Along every step of your program, we have made extraordinary efforts to keep you safe and limit your exposure to possible hazards. In keeping with this high standard for safety, we feel it necessary to address the issue of student pregnancy.

Many of the chemicals we handle daily within the veterinary world pose many potential threats to unborn babies in nearly every stage of pregnancy. While the safety protocols and procedures here at VTSU rival the highest standards in the industry, there still remains the potential for harm for a pregnant mother and her unborn baby.

The choice to declare your pregnancy is voluntary. Students who are, or become, pregnant should notify the program director. In addition to those mentioned above, veterinary medicine has with it many inherent dangers for the developing fetus. Hazards such as inhalation of anesthetic gases, exposure to radiation, exposure to chemotherapeutic agents, trauma by a horse or cow or an animal bite or scratch are just a few of the hazards which are inherently more dangerous to the pregnant individual and her fetus. The pregnant student is advised to seek advice and counsel from her attending physician concerning continuing the Veterinary Technology Program at VTSU. Upon notification of pregnancy by the student, the following guidelines will be followed:

Upon declaration of pregnancy by the student, general program policies will be reviewed in detail in order to provide the student with a complete understanding of her status in the program, whether she is able to complete the program during her pregnancy or after pregnancy leave.

The pregnant student must follow the established program policies and meet the same clinical and educational criteria as all other students before graduation and recommendation for the veterinary registration examinations.

If the student chooses to leave the program during her pregnancy, she will be eligible for reinstatement into the program upon completion of her pregnancy leave. The student must re-enroll in the courses from which she dropped due to her pregnancy leave. If the student does not re-enter the program at the earliest possible date after termination of the pregnancy leave, she will have to apply for the program under the standard of application procedure, should she wish to enter the program at a later date.

If the student remains in the Veterinary Technology Program during her pregnancy, she accepts full responsibility for her actions and relieves Vermont State University, its faculty, and veterinary clinical/practicum affiliates of any responsibilities in case of adverse effects.

You may wish to meet with each of your instructors and lab assistants to discuss the need to make any adjustments in your lab participation requirements. This may include some or all of the following courses:

- Applied Lab Methods
 - Animal Care and Restraint
 - Veterinary Technology Externships
 - Animal Diseases
 - Zoology
 - Introduction to Animal Care 1 and 2
 - Anatomy & Physiology
 - Laboratory Techniques 1 and 2
 - Veterinary Clinical Techniques 1 and 2
-
- Objectives for a laboratory or course exercise should will not be waived, however, reasonable efforts will be made to accommodate your safety needs.
 - In the event that such accommodations cannot be made and objectives cannot be reasonably met, you will receive an Incomplete ("I" grade) in the course, and you will receive written specifications on when and how objectives or time requirements are to be completed. Or, if the drop date for the semester has not yet passed, you can withdraw from the course and complete it at a later date.
 - The instructor may determine and document in writing how the objectives of the course may be safely completed in an alternative manner.

Pregnancy Signature Page

Once you have read and understood the above information regarding the issue of pregnancy while enrolled in the Veterinary Technology Program, please complete the section below, remembering to sign it. Detach the section and return to Program Technicians.

The above information is for you to keep as you complete the program. Please feel free to contact us at any point, should you have any questions.

I have read the above information and understand the importance of following the above listed steps to create the safest environment, should I become pregnant during my completion of VTSU's Veterinary Technology Program.

I understand that it is my responsibility to report my pregnancy to my Program Director, as well as to any instructors or assistants of any classes that utilize potential biohazards so that any changes can be made in my course/lab participation. I also understand that it is also my responsibility to maintain an awareness of what may be potentially hazardous and to approach my instructors/assistants if am unsure. It will be my responsibility to discuss with my physician, using the attached Physician Visit Checklist for Pregnancy, the potential risks to my unborn child and me, thus making the decision to complete the program while pregnant or to return at a later date.

I accept the responsibility of understanding precautions necessary to decrease my risk and exposure, should I decide to continue my educational progress in the Veterinary Technology Program while pregnant and will not hold VTSU or its employees liable for any complications.

Vermont State University
VETERINARY TECHNOLOGY PROGRAM
Physician Visit Checklist for Pregnancy

Physician has discussed the following with me concerning potential risks to myself and the fetus:

8. Exposure to anesthetic gases
9. Exposure to the rabies vaccine (both pre- and post-exposure)
10. Exposure to teratogens including cytotoxic compounds, chemical agents, sterilizing agents, cleaning agents, preserving agents and fixing agents
11. Exposure to hormones (e.g., prostaglandins and progesterones)
12. Exposure to ionizing radiation and other sources of radioactive materials
13. Exposure to zoonotic diseases including, but not limited to, leptospirosis, salmonellosis, toxoplasmosis, brucellosis, cat scratch disease, fungal diseases, psittacosis, rabies, Lyme disease, tuberculosis, West Nile virus
14. Traumatic injury including, but not limited to, bites, kicks, scratches, possible electrical hazard exposure from equipment

I have discussed with my physician that I understand as a Veterinary Technology student I have inherent risks in my profession; and I accept the responsibility of understanding precautions necessary to decrease my risk and exposure as I complete my educational process in the Veterinary Technology Program.
